Checkpoint 8   Sprint review 5 - Marcio   10-06-2022

Wolfs, Esther E.A.C.   3 days ago
im a little bit behind this sprint and still need to do some more work. The front end improved and has some functionalities. In the final sprint I need to update some documents and really focus on the quality of my project, by making enough unit tests.

The backend looks nice. I need to focus on connecting the backend and the front end, to make sure the functionalities that i have work and its a "complete" product and fully implementing authentication/authorisation. I need to make some more unit tests, to get enough coverage, and make a test plan.

I refactored my code, I used proper dependency injection and dtos. I made a few unit tests for the business layer, I am still working on the controller layer and should also make tests for the repository layer.

Checkpoint 5   Marcio   11-04-2022

The structure of my project looked fine, I used the dependency injection and the correct layering.
I need to look at the id when creating new objects and passing the parameters.
For now I should focus on connecting to a database and make some unit tests for the database

I made a lot of changes after the last talk with Tim. I updated my layering and documents and showed the progress I made in the last week.

Checkpoint 3 **Tim** 29-03-2022

Wolfs, Esther E.A.C. 3 months ago

I showed my backend and the structure and layering. I need to make some changes to names, for example not using "FakeDataBase", make unit tests for the service layer and not the persistence layer and make the connection between frontend and backend.

For my C4 document I need to update the controllers to include a controller for rooms and think about an internal or external database.

I need state a problem and choose a research question, based on that problem. I need to chose a research question that is relevant for my project.

Checkpoint 2 **Marcio** 21-03-2022

Wolfs, Esther E.A.C. 3 months ago

I showed the updated layering for my Java project, to use the interface and business layer. I also showed the test project I made to connect Java with React, where it shows the first and last name of the employees and you can delete the selected user.

We talked about my idea for the individual track project. We discussed some possible features.

I showed the user stories I made a got feedback on how to improve them.
